

Name: Billy Ryan Kibet

Git username: BillyKibet-dev

Email: ryankibet15@gmail.com

2.Project Link: <https://is-project-2026.github.io/busgo-158340/>

3.Reflection

A.Best Commit

url: <https://github.com/IS-PROJECT-2026/busgo-158340/commit/74c2bcbd8d6bbd083fa7765343eec403026f8fc1>

Reason: I selected this commit because it demonstrates a clear Conventional Commit format using the `feat` type and a concise subject describing the functionality that was added. The commit represented a meaningful functional improvement to the BusGo booking workflow by adding ticket confirmation.

B.Mistake/Struggle

url: <https://github.com/IS-PROJECT-2026/busgo-158340/commit/72a41497904b8ab0e128e2791d9086b6afd903ae>

Reason: I accidentally committed `chore: add booking utility file` directly to the `main` branch instead of creating an issue-linked feature branch first. I recognized the workflow mistake and continued subsequent development using separate branches and pull requests, ensuring that later changes followed the required branch-isolation workflow.

C.Pull Request I'm Proud Of

url: <https://github.com/IS-PROJECT-2026/busgo-158340/pull/38>

Reason: Before merging, I reviewed the changed files and verified that the pull request description clearly explained the booking workflow tests and linked the work to Issue #16. I also reviewed the ticket-page layout changes and confirmed that the booking workflow, seat selection, localStorage persistence, and My Tickets functionality were working as expected.

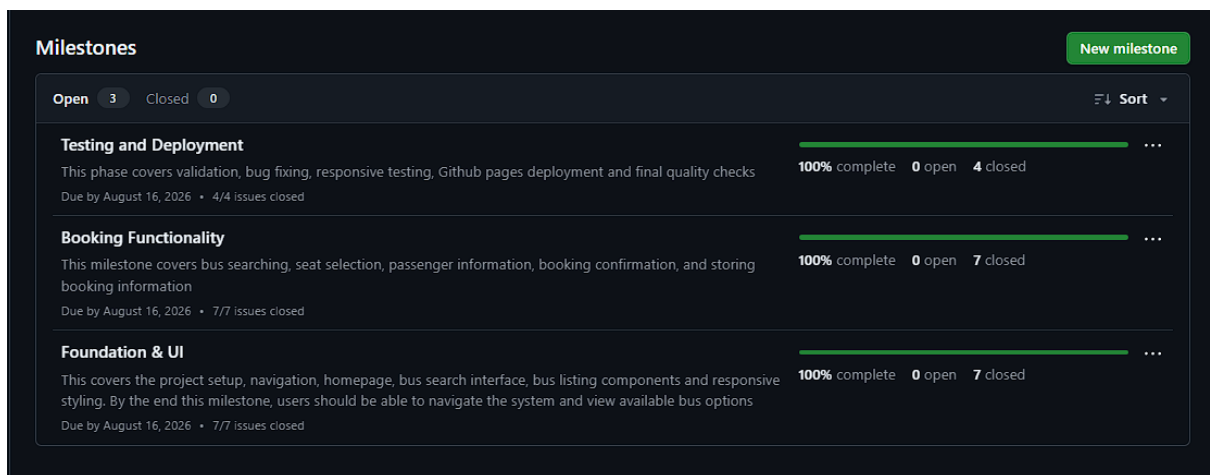

D. One Thing You would Do Differently

Reason: If I restarted the project, I would create the issue-linked feature branch before making any code changes and would avoid committing directly to `main`. This would make the entire commit history consistent with the required branch isolation workflow from the beginning.

url: <https://github.com/IS-PROJECT-2026/busgo-158340/commit/72a41497904b8ab0e128e2791d9086b6afd903ae>

4. Screenshots of Key GitHub Features

A. Milestones and issues

The screenshot displays the 'Milestones' section of a GitHub repository. At the top right, there is a green button labeled 'New milestone'. Below this, a filter bar shows 'Open' with a count of 3 and 'Closed' with a count of 0. A 'Sort' dropdown menu is also present. The main content area lists three milestones, each with a progress bar, a description, a due date, and issue counts.

Milestone Name	Progress	Description	Due Date	Issues Closed
Testing and Deployment	100% complete	This phase covers validation, bug fixing, responsive testing, Github pages deployment and final quality checks	August 16, 2026	4/4
Booking Functionality	100% complete	This milestone covers bus searching, seat selection, passenger information, booking confirmation, and storing booking information	August 16, 2026	7/7
Foundation & UI	100% complete	This covers the project setup, navigation, homepage, bus search interface, bus listing components and responsive styling. By the end this milestone, users should be able to navigate the system and view available bus options	August 16, 2026	7/7

1

The BusGo project was divided into multiple development milestones, with each milestone containing granular issues used to track individual development tasks.

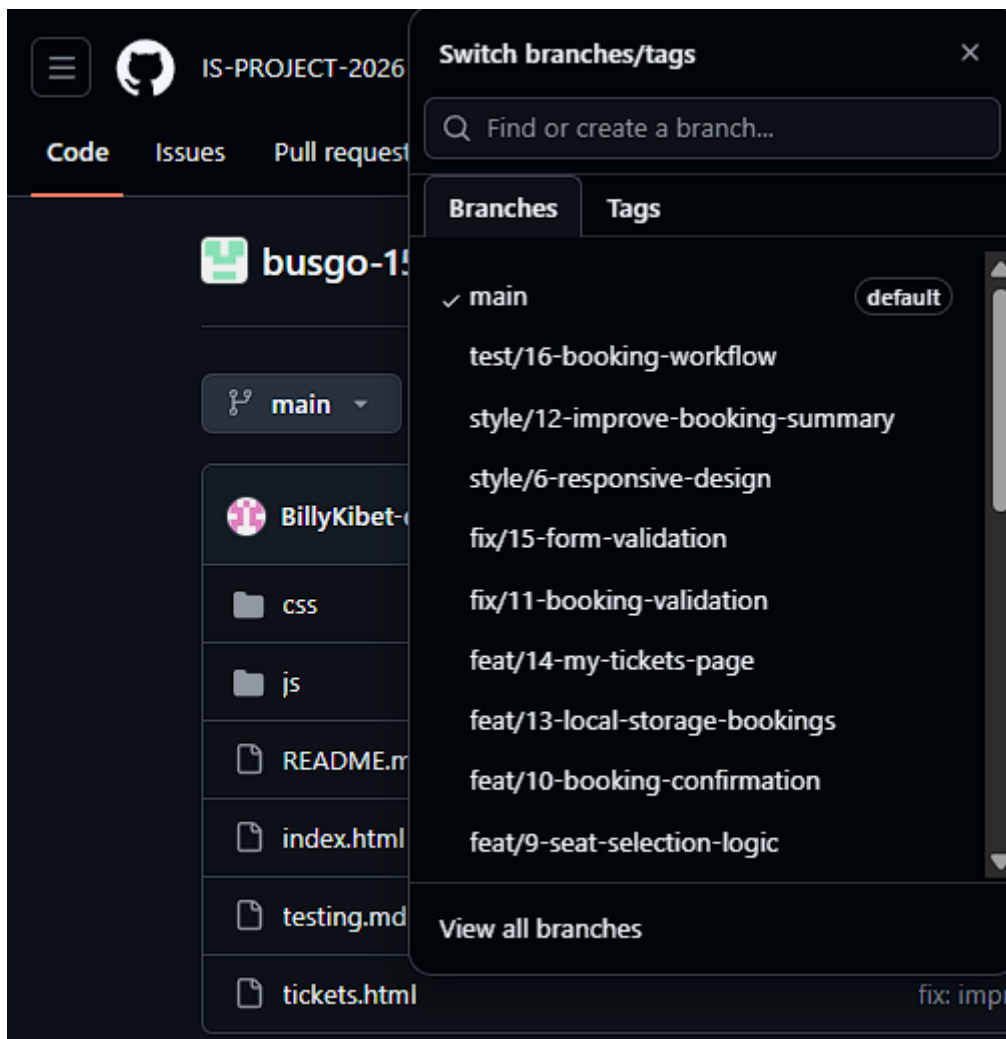

B. Project Board

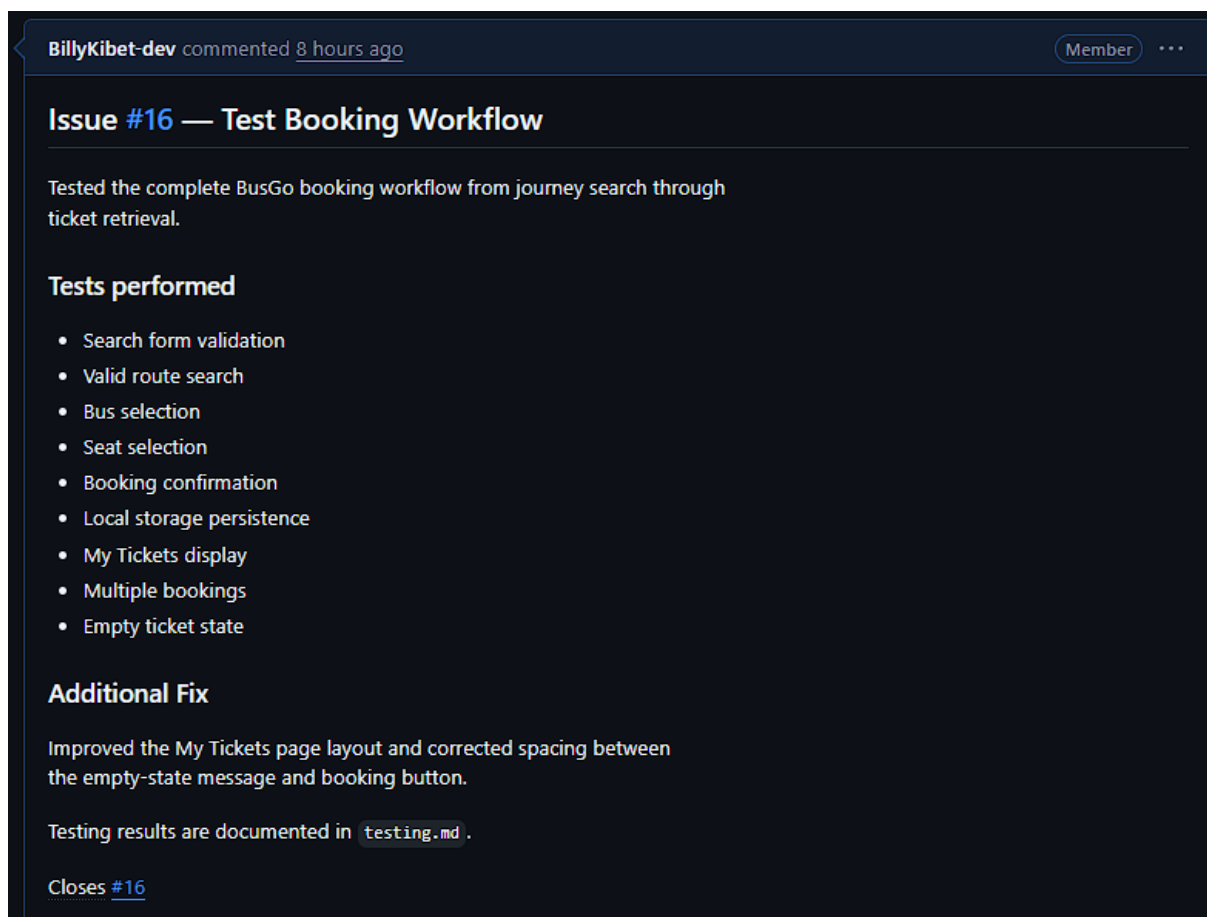

The BusGo project board was used to track development progress by moving issues between To Do, In Progress, and Done as work progressed.

C.Branching Architecture

The branch history demonstrates isolated development using issue-related and purpose-specific branch names, including feature, testing, and conflict-resolution branches.

D. Pull Request

This pull request demonstrates traceability between the development branch, Issue #16, the implemented changes, and the final merge into main.

5. Merge Conflict Evidence

```

The merge attempt between two different branches produced a merge conflict because both branches contained incompatible changes affecting the same content on a given file as demonstrated by the pictures above

The editor displayed Git's conflict markers showing the competing versions from the two branches. I reviewed both versions and selected/combined the appropriate changes to preserve the required BusGo functionality.

conflict 2

A modify/delete conflict occurs when one branch modifies a file while another branch deletes the same file. Git cannot automatically determine whether the file should remain with the modifications or be deleted, so manual resolution is required.

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>git checkout -b conflict/2-delete-summary
Switched to a new branch 'conflict/2-delete-summary'
```

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>git rm css/booking-summary.css
rm 'css/booking-summary.css'
```

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>git status
On branch conflict/2-delete-summary
Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
        deleted:    css/booking-summary.css
```

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>git merge conflict/2-delete-summary
CONFLICT (modify/delete): css/booking-summary.css deleted in conflict/2-delete-summary and modified in HEAD. Version HEAD of css/booking-summary.css left in tree.
Automatic merge failed; fix conflicts and then commit the result.

C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>
```

The conflict occurred between two branches because one branch modified the booking-summary.css while the other branch deleted it.

Conflict 3

A rename conflict can occur when Git detects that the same file has been renamed or moved differently across branches, particularly when the other branch also changes the original file or its related path. Git may require manual intervention to determine the correct final file location and content.

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>git checkout -b conflict/3-rename-file
Switched to a new branch 'conflict/3-rename-file'
```

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>git mv js/booking.js js/booking-utils.js
```

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>git status
On branch conflict/3-rename-file
Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
        renamed:   js/booking.js -> js/booking-utils.js
```

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>
```

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>git merge conflict/3-add-a
Auto-merging js/confirmation.js
CONFLICT (add/add): Merge conflict in js/confirmation.js
Automatic merge failed; fix conflicts and then commit the result.
```

```
C:\Users\ryank\OneDrive\Desktop\school documents\GROUP 4E 2026\busgo-158340>
```

The conflict involved the booking utility file and the conflicting changes made across the participating branches. The final version was resolved manually before the branches were merged.
